

## TECHNOTE [28/2014]

**DATE:** NOVEMBER, 2014  
**AUTHOR:** cardPresso TECHNICAL SUPPORT  
**PRODUCT/AREA:** Design

### Lock design items without blocking user permissions

In this technote we explain how to block design items from being changed without using the User permissions.

On our design we want to lock the selected items.

We save the design as \*.cardModel

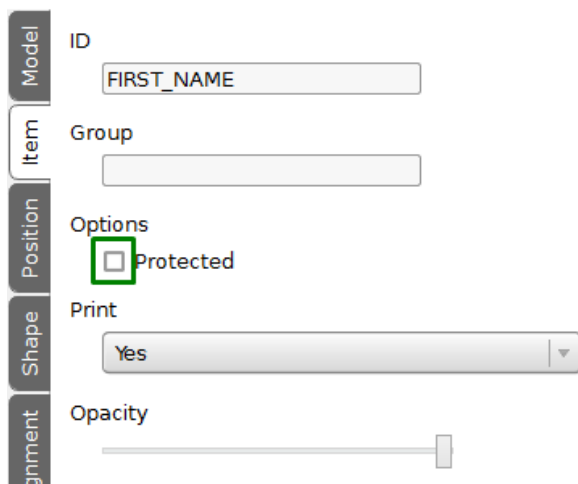

File name:	cardPresso Business Card Comp.cardModel
Save as type:	MODELS (*.cardModel)

Close the design and open the \*.cardModel file.

In it, select the items and in the new "Model" dock bar activate the "Not Selectable" option.

After that please go to **Item** tab and mark the **Protected** select box.

Save the design as \*.card.

File name:

Save as type:

Open it and now when we try to select all items, the ones changed to "Not Selectable" cannot be selected or changed without saving the design again as \*.cardModel and disabling the "Not Selectable" option.
